

[HW1] Team Organization & Project Idea - Group 4

Assignment: Organize your teams, choose project idea.

By now you will have been assigned to a team. Please submit your chosen topic and remember that you need to have at least one person covering each of the 4 skills:

- Leadership
- Writing
- User Communication
- Visual Design

This does NOT mean that, e.g. the person marked as Designer will do all the design-related work. You'll share the workload and work together on all aspects of the project. You need to share responsibilities evenly and work together. Please contribute in the best way you can. You can even switch roles during the term if you wish so.

In all of your future project documents (which you will submit in Canvas), you must include a **"participation report"** that summarizes what tasks each member accomplished for that part of the project. Inactive members should be reported and will get zero credit for that part of the project. See a template for participation report [here](#) .

Work with your group to pick a project idea.

How to turn it in: Please attach a document here with a list of your team members' names and roles, and a brief (1-2 sentence) project idea. Please, only one document per group. Your group can assign the roles. Just list them in your message with the topic you choose. **Note:** "Participation report" is not required for this submission.

Group 4 Team Members (onid) / Team Org

- Arthur Liou (lioua) / Leadership
- Becky Chao (chaobe) / Writing
- Peter Nguyen (nguyepe2) / User Communication
- Zijing Huang (huangzij) / Visual Design

Project Idea: We plan to do the "Advanced Drag and Drop Website Builder" project proposal (suggested by Andrew Castellano). This will be an interesting challenge, as it would have a lot of different functionality possibilities and might not have too many UI views. As a group, we'd increase the number / types of UI views, which would aid in allowing us to do user research.

As an alternate / backup in case we find that the "Advanced Drag and Drop Website Builder" is not well suited for a true UX project proposal, we'll have the "Rate My Professors" project proposal (suggested by Regina Weeks). We think the site could be rebuilt from the ground up with usability in mind and it could better integrate the search and save teachers functionalities used in its app version.
